an EXL company

LISS SYSTEMS WAS SET UP IN 1996 WITH THE INITIATIVE AND VISION TO REALISE THAT THE CHALLENGES OF A RAPIDLY CHANGING FINANCIAL SERVICES INDUSTRY DEMANDED NEW SOLUTIONS. WE ENABLED CUSTOMERS TO DESIGN, WRITE, SELL AND ADMINISTER LIFE INSURANCE PRODUCTS THAT COULD BE LAUNCHED RAPIDLY. eLISSIA NOW ENHANCES THIS BY OFFERING THIS FLEXIBILITY TO ANY MARKET, VIA ANY DISTRIBUTION CHANNEL.

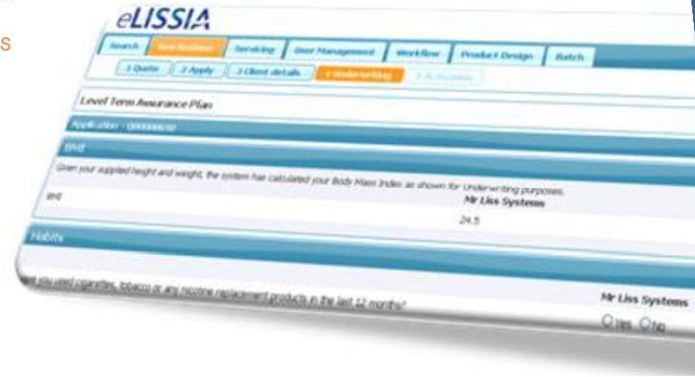

Technology at work for you

PUTTING YOU IN CONTROL OF YOUR BUSINESS

With its highly flexible and extensive product controls eLISSIA puts the business firmly in control of new product development. Unlike many systems that require development changes for new products, all aspects of defining and servicing a product are driven by parameters within eLISSIA™. The extent of these controls means that a huge variety of Life product types can be readily supported.

Evolutionary product changes bringing new features to an existing product can be made within a few hours, whilst an entirely new product can often be setup within days, compressing time to market to days or weeks, rather than the months or even years that it can take.

This flexibility genuinely hands back control of IT to the business, not only through speed to market, but also in the creativity and responsiveness that is unleashed when the system is no longer a constraint.

SUPPORTED PRODUCT TYPES

TRADITIONAL OR UNIT LINKED

- ENDOWMENT
- WHOLE OF LIFE
- PENSION
- TERM (INCL DECREASING TERM)
- INVESTMENT BOND
- MORTGAGE PROTECTION
- BANCASSURANCE STYLE

ARCHITECTURE

An n-tier system architecture with proven business scalability.

Built using a J2EE framework it therefore supports a wide range of operating systems such as Windows, UNIX and Linux, for a robust and future proof solution. The technology also brings ease of integration, allowing eLISSIA™ components such as Underwriting and Workflow to be used with an existing administrative environment.

flexible solutions for your business needs

FUNCTIONALLY RICH

eLISSIA™ boasts expert underwriting and workflow capabilities allowing straight through processing of Life products. It is particularly suited to the needs of the international market, with sophisticated multi-currency and multi-lingual capabilities. It has been highly developed for unit linked products, but also supports

traditional life and bancassurance business. LISSIA™ has a general-purpose structure reflecting the basic building blocks of the Financial Service industry - Products, Clients, Contracts, Distribution Channels, Funding; these are linked by payment, claims and pricing processes as well of course as normal accounting, security and auditing functions.

RAPIDLY CREATE, LAUNCH AND MANAGE LIFE INSURANCE PRODUCTS VIA ANY DISTRIBUTION CHANNEL

CUSTOMER SUPPORT

Customer support is a core part of the LISS offering, helping clients to maintain and develop their systems to meet the changing needs of the business. Our extensive knowledge of the insurance industry allows us to focus on core business solutions as well as providing excellent relationship management and technical support.

We believe it is important to develop and maintain long-term relationships with our customers and we tailor our support to meet the differing strategic and operational needs of the individual businesses.

In addition, we are happy to discuss alternative support provision and development of partnerships with more local support providers where this will be helpful for the business.

CUSTOM SOLUTIONS

We recognise that each company is different and will have different requirements for services, and we aim to fit in with our customers' requirements. A variety of solutions are offered which can be tailored to the specific needs of the client.

SOFTWARE ENGINE

A configurable software engine providing straight through processing that manages policy administration, product design, claims and accounting information

EBUSINESS

Our eLISSIA offering provides a complete end-to-end online solution. This web-based, on-demand service enables insurers to rapidly launch new products, create broader distribution networks and manage the full policy life cycle in real time.

Building upon an enterprise framework

CORE TECHNOLOGY

eLissia has been developed for the Java 2 Platform, Enterprise Edition (J2EE) using MyEclipse, an Eclipse-based J2EE development platform. It is the latest progression of our LISSIA solution which itself has been developed over the last 10 years using CA Gen.

CA Gen is a powerful model driven environment that gives us the ability to take pre-existing sections of business functionality (e.g. Policy Servicing, Commission) from the LISSIA platform and migrate them as Java EJBs for use as the backbone services in eLissia. These services are then connected to a web frontend using the Struts 2 Web Application Framework allowing us to utilise the full power of Java.

In this respect we are also able to wrap our services to integrate with other applications using architectures such as XML/HTTP, SOAP, WS, JCA, JMS and any other solution that can communicate with a Java or XML interface.

Our solution is deployed into industry standard web application servers allowing all the benefits associated with this such as ease of administration and platform independence.

technology at work for you reducing time to market and cost of change...

FUNCTIONAL ARCHITECTURE

This diagram provides a generic view of the functional and technical architecture, showing the Business Event Processes (with Accounting at their core)

SUPPORTED DATABASE PLATFORMS

- ORACLE
- MICROSOFT SQL SERVER
- IBM DB2

SUPPORTED APPLICATION SERVERS

- ORACLE WEBLOGIC
 - IBM WEBSHERE
- WebSphere. software

INTEGRATION

We can support integration with 3rd party applications such as workflow or document production

MULTI-LINGUAL

eLissia makes use of standard Java language packs to enable rapid deployment of any required language translation

THEME DESIGNER

Allows rapid rebranding to your corporate standards and to those of your customers
